#### DETAILED ACTION

## Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 11 and 37 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 11, the limitation "the surface of the elongated gas discharge laser" in the second line is vague because it is not clear which laser surface is the recited surface.

Claim 37, the limitation "the anodization layer" in line 6 should probably be "the first anodization layer" to avoid confusion between the two anodization layers.

#### Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fleurov et al.(6,466,602) in view of Sukhman et al.(5,982,803).

Application/Control Number: 10/672,722

Art Unit: 2828

Claim 3, figure 9B of Fleurov discloses an anode(46) and an up stream fairing(on the other side of no. 44) each composed of electrically conductive material. The discharge receiving portion(46) is not anodized.

Sukhman discloses anodizing an electrode(col. 3, lines 39-42) in a gas laser device to optimize the laser operating parameters(col. 3, lines 8-17).

Claim 4, the anode and the up stream fairing disclosed in figure 9B of Fleurov are constructed as one piece.

Claims 5-6, the anode and the up stream fairing disclosed in figure 9B of Fleuroy are expose to the laser gas. The complete electrode disclosed in Sukhman is anodized(col. 3, lines 39-42).

Claims 7-10, Sukhman discloses selecting the thickness of the anodized layer on the discharge footprint of the electrode to obtain a desired impedance(col. 8, lines 28-33 and 38-39) and erosion resistance results from the selected anodizing material.

It would have been obvious to one of ordinary skill in the art at the time of the invention to anodize the anode disclosed in Fleurov to optimize the laser operating parameters as disclosed in Sukhman.

5. Claims 11-12 and 24-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sukhman in view of Wakata et al.(4,837,773).

Claims 11-12, figures 4 and 5 of Sukhman disclose an elongated gas discharge anode(91 & 92) with a discharge region extending longitudinally along the surface of the elongated gas discharge laser with a portion of the discharge region covered with a pre-

Art Unit: 2828

formed reef formed of an anodized material(col. 3, lines 39-42). Sukhman does not disclose anode pores.

Figure 6 of Wakata discloses an electrode(6) with generally uniform pore size and spacing to obtain an electric discharge in the pores of the electrode(col. 5, lines 15-18).

Claims 24-25, the reef disclosed in Sukhman is made from aluminum(col. 3, lines 39-42).

It would have been obvious to one of ordinary skill in the art at the time of the invention to form pores in the anode disclosed in Sukhman to obtain an electric discharge in the pores as disclosed in Wakata.

### Allowable Subject Matter

- 6. Claims 1-2 and 41-67 are allowed.
- 7. Claims 13-23 and 26-37 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 8. Claims 38-40 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 9. The following is a statement of reasons for the indication of allowable subject matter.

Application/Control Number: 10/672,722

Art Unit: 2828

Page 5

The following limitations are primarily responsible for distinguishing these claims over the prior art.

Regarding claim 1, the limitations concerning the crown in traverse cross section having the shape of the upper half of a canted ellipse rotated in the pre-ionizer direction; regarding claim 2, the limitations concerning an asymmetric discharge side of the anode blade and the top portion beveled away from the asymmetric discharge side of the anode; regarding claims 13, 15, 17, 19, 21, 23, 26, 28, 30, 32, 34 and 36, the limitation concerning the preformed reef being formed of a vacuum infiltrated porous anodized material as recited in claim 13; regarding claims 14, 16, 18, 20, 22, 27, 29, 31, 33 and 35, the limitation concerning the surface of the discharge region being mechanically textured prior to the formation of the preformed reef as recited in claim 14; regarding claims 37-40, the limitations concerning a gas discharge electrode discharge region preformed reef formed by forming a first anodization layer, removing the first layer and forming a second anodization layer as recited in claim 37; and regarding claims 41-67, the limitations concerning forming a reef template and growing a porous layer of insulating material for an elongated gas discharge electrode as recited in claim 41.

Proper motivation could not be found in the prior art to combine references disclosing these limitations with the references disclosing the other limitations recited in these claims.

Application/Control Number: 10/672,722 Page 6

Art Unit: 2828

#### Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dickey et al.(5,141,603) discloses some of the recited structure used in a capacitor, but not an electrode.

## Correspondence

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Jim Vannucci whose phone number is (571) 272-1820.

Any inquiry of a general nature or relating to the status of this application should be directed to the Technology Center whose telephone number is (703) 308-0956.

Papers related to Technology Center 2800 applications only may be submitted to Technology Center 2800 by facsimile transmission. Any transmission not to be considered an official response must be clearly marked "DRAFT". The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Technology Center Fax Center number is (703) 872-9306.
